Mixed By Dean Ashton and released on CD & LP through V2 Records.. CDs References External links Discogs entry for Soul Savers Category:British hip hop groups Category:British electronic music groups Category:British funk musical groups Category:Black British musical groupsThe long term goal of this project is to contribute to the diagnosis and treatment of cognitive and emotional disturbances in Parkinson's disease (PD). The primary aim of this proposal is to test the hypothesis that low mood and apathy in PD are maintained by mechanisms that are distinct from those maintaining cognitive impairment. Specifically, this proposal seeks to delineate the cognitive and affective aspects of PD patients that are maintained by the dopaminergic basal ganglia system and those that are independent of this system. Two types of cognitive functions will be examined; attentional and executive control processes, which are respectively related to and independent of the dopaminergic

basal ganglia system. In contrast, the maintenance of mood and apathy will be examined by comparing the phenomenology of mood and apathy between PD patients and healthy control subjects. PD patients will be compared with healthy control subjects on the following measures: attentional and executive control processes, mood and apathy as assessed by ratings, trait measures of mood and apathy, and blood and CSF dopamine. Subjects with PD will be enrolled in a cross-sectional study of mood and apathy as well as a double-blind, placebo-controlled study of the effects of pramipexole on mood and apathy. After enrollment in the cross-sectional and double-blind studies, subjects will receive chronic dopaminergic therapy and will be followed at frequent intervals over a 4-month period. This design will allow for the development of a longitudinal picture of the relationship between cognitive dysfunction and mood and apathy in PD. In addition, this design will allow the study of the specific mechanisms by which dopaminergic dysfunction contributes to these two types of cognitive and emotional deficits. Finally, this study will permit the determination of whether dopaminergic therapy can alleviate the symptoms of mood and apathy in PD.

Inpatient cesarean section in a mid-size private hospital in Texas: predictors of one-year outcomes. The study aimed to evaluate the predictors of outcomes among women who underwent inpatient cesarean section in a private hospital. A retrospective chart review of 112 women who underwent inpatient cesarean section during a 9-year period (2002-2011)
